

BFA Show Proposal

Team members: Emily Cheung, Thanh Truong, Nicole Yuen

As a group, we will be creating a hologram box that displays a video that portrays our journey as an artist/designer. We will be presenting this through the use of colors and patterns as a video. (feel free to add other stuff). In our project, we will demonstrate the feeling of joy and wonder during the early years of exploration, the chaos/confusion caused by our own insecurity, and the resolution to move on.

Artist Statement:

-in progress....

How we will create it:

- Will use laser cut for the box
- LED lights for decoration (Arduino)
- Maya to create 3D video
- Other possible Arduinos: Distance sensors, button, touch sensor

Why we chose to go with this idea:

- The reason we decide to go with this idea is due to the fact that this will be one of our last show before finishing the program, so we want to take this opportunity to show everyone our internal journey as artist/designer.
- Working together will allow each of us to combine our skills in order to make something beautiful.
